

## Testing Continues on Superfund Site in Grants

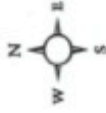

### Road Closures Through April 22

GRANTS, NM — Ongoing cleanup activities continued on Tuesday, March 16 for the groundwater remediation project on First Street. CH2M (now Jacobs) is the contractor for the Environmental Protection Agency (EPA) Grants Chlorinated Solvents Plume Superfund Site (the site) associated with the Holiday Cleaners. According to information received from the EPA, activities consisting of groundwater cleanup activities at existing wells on the City streets and shoulders will go through April 22, 20 at various locations.

Cleanup activity requires limited road and shoulder closures during work to allow for the protection of personnel, equipment, and the general public. Lane closures and shoulder work will occur from approximately 7 am to 5 pm daily and the roads will fully reopen at the completion of the work day. No overnight road closures are anticipated.

When required, road closures will be conducted with movable traffic barricades and traffic control barrels. Shoulder work areas will be cordoned off using barrels around the active work zone. The map shows road closure and shoulder work areas.

Despite the fact field personnel may not be within the work zone the entire time, the traffic control equipment will be set up each day. During emergencies, the traffic control equipment (e.g., barricades and barrels) can be moved by official personnel to provide access within the work areas to emergency equipment.
